## Chapter 4 Linear Motion

## Exercises

### 4.1 Motion Is Relative (page 47)

1. Is the following sentence true or false? When we describe the motion of one object with respect to another, we say that the object is moving relative to the other object.
2. An object is $\qquad$ if its position relative to a fixed point is $\qquad$ _.
3. A driver is going 20 kilometers per hour down the street. What is the driver's speed relative to?

### 4.2 Speed (pages 48-49)

4. Define speed.
5. Complete the following equation: speed = distance/ $\qquad$
6. How is the slash symbol read in $\mathrm{km} / \mathrm{h}$ ? $\qquad$
7. Circle the letters of the sentences that are true of instantaneous speed.
a. Instantaneous speed is the total distance covered divided by time.
b. Instantaneous speed is the speed at any instant.
c. The speedometer on a car shows the instantaneous speed.
d. If you traveled 30 kilometers in 1 hour, your instantaneous speed would be $30 \mathrm{~km} / \mathrm{h}$.
8. How is average speed calculated?
9. If you traveled 80 kilometers in 2 hours, what was your average speed?
10. If your average speed is 30 kilometers per hour and your trip took 1 hour, what was the total distance covered?

### 4.3 Velocity (page 50)

Determine if each of the following statements is true or false. Write the correct word on the line provided.
$\qquad$ 11. Speed is velocity in a given direction.
$\qquad$ 12. The speed of a plane can be described as $300 \mathrm{mi} / \mathrm{h}$.
13. The velocity of a car can be described as $60 \mathrm{~km} / \mathrm{h}$ to the north.
14. Speed is a vector quantity.
15. Velocity is a vector quantity.
$\qquad$
$\qquad$ Date $\qquad$

## Chapter 4 Linear Motion

## 16. If either the

$\qquad$ or the is changing (or both are), then the velocity is changing.

### 4.4 Acceleration (pages 51-52)

17. What is acceleration?
18. How is acceleration calculated?
19. In physics, the term acceleration applies to both $\qquad$ and
$\qquad$ in speed.
20. Acceleration is a change in speed, a change in $\qquad$ or both.
21. Is the following sentence true or false? Acceleration is a vector quantity.
22. If a car is traveling around a curve on a highway at a constant speed, is the car accelerating? Explain your answer.
23. Circle the letter of the value and units that represent acceleration.
a. 5 km
b. $15 \mathrm{~km} / \mathrm{s}$
c. $25 \mathrm{~s} / \mathrm{km}$
d. $55 \mathrm{~km} / \mathrm{s}^{2}$

### 4.5 Free Fall: How Fast (pages 53-55)

24. Is the following sentence true or false? In real life, air resistance has no effect on the acceleration of a falling object. $\qquad$
25. An object moving under the influence of the gravitational force only is said to be in $\qquad$
26. Define elapsed time.

Match each symbol or value with the correct phrase.

## Phrase

$\qquad$ 27. an approximate value of the acceleration of an object in free fall
28. used to represent acceleration due to gravity
29. an accurate value of acceleration of an object in free fall
30. used for both speed and velocity in the equation for instantaneous speed
$\qquad$
$\qquad$ Date $\qquad$

## Chapter 4 Linear Motion

31. What is the instantaneous speed of an object that is at its highest point when it is thrown straight up in the air?
32. When an object is thrown straight up into the air, what is its acceleration when it is moving upward? $\qquad$
33. What is the acceleration of the same object in the above question when it is descending? $\qquad$

### 4.6 Free Fall: How Far (page 56)

34. Is the following sentence true or false? For each second of free fall, an object falls a greater distance than it did in the previous second.
35. At the end of time $t$, an object in free fall has fallen a distance equal to
36. What are the equations used to calculate velocity and distance for a freely falling object?

### 4.7 Graphs of Motion (pages 57-58)

Use the graph below to answer Questions 37-39.

37. What is the relationship between time and speed on this graph?
38. What does the slope of the line on this graph represent?
39. What is the slope of the graph?
$\qquad$
$\qquad$
$\qquad$

## Chapter 4 Linear Motion

Use the graph below to answer Questions 40 and 41.
Distance vs. Time for a Freely Falling Object

40. The relationship between distance and time on this graph is
$\qquad$ and the curve is $\qquad$
41. What does the slope of the line at each point represent?

### 4.8 Air Resistance and Falling Objects (page 59)

42. Explain why a dropped coin reaches the ground before a feather.
43. Explain what would happen if a coin and a feather were dropped in a vacuum tube.
44. If air resistance is negligible, a falling object can be considered

### 4.9 How Fast, How Far, How Quickly How Fast Changes (page 59)

Match each word or equation with the correct phrase.

## Phrase

## Word or Equation

45. the word for how fast something freely falls from rest after an elapsed time
a. $d=\frac{1}{2} g t^{2}$
46. the equation for speed and velocity
b. $v=g t$
c. acceleration
$\qquad$
$\qquad$ 47. the word for how far an object
d. speed
has fallen
e. distance
$\qquad$ 48. the equation for distance
$\qquad$ 49. the word for the rate at which velocity changes
