

# Egg Drop Project

## Post-Write Up

Due: Monday, October 23

**Five paragraph essay**, much like the trial paper. I do not need a recap of how your project was built (already in your pre-write up) or how the test day went (I was there). Instead, for your post-write up, include and reflect on all of the following:

- I. **Intro:** Create interest for your reader, introduce any relevant background info, briefly present your findings
- II. **Trends:** Write an explanation for what trends you noticed on egg drop day. What were the most/least successful designs? Why?
- III. **Learning Experience:** What did you learn in designing, building, and testing your model? How could you improve your design?
- IV. **Thinking Forward:** What is one question you now have based upon this project? What test could you design to answer your question? Remember, good research questions explore *relationships*, and good tests investigate only *one variable at a time*.
- V. **Conclusion:** Answer the question *so what?* What is important to take away from your findings? Tie up each piece of evidence you have included and briefly re-state your findings.

### Format:

- Write ups must be double-spaced
- 12pt font
- Either Arial, Helvetica, or Times New Roman font
- 1" margins
- (Standard MLA format)
