Force Problems – Answer on another sheet of paper - **DRAW A PICTURE!**

$$F = ma$$

$$F = mg$$

$$g = 9.8 \text{ m/s}^2$$

$$N = \text{kg} \cdot \text{m/s}^2$$

1. An object with a mass of 9-kg is observed to have an initial velocity of 3 m/s. Twelve seconds later its velocity is 24 m/s. What is the acceleration acting on the object?
  - a. What must be the force acting on the object during that time?
  
  
  
  
  
  
  
  
  
  
  - b. If the 9-kg object initial position is 15-m from the reference point, what will be its final position?
  
2. A 95-N force acts upon an object. It is initially at rest and is observed to travel a distance of 400-m in 6-seconds. What is the acceleration acting on the object?
  - a. What is the mass of the object?
  
  
  
  
  
  
  
  
  
  
  - b. What is the final velocity of the 95-N object?
  
3. A parachutist is falling under the influence of Earth's gravity. His mass is 100-kg.
  - a. Neglecting air resistance, what will be his acceleration?
  
  
  
  
  
  
  
  
  
  
  - b. What, therefore, is the net force acting on the parachutist (still neglecting air resistance)?
  
  
  
  
  
  
  
  
  
  
  - c. Now he opens the parachute, which provides an additional force of 400-N in the opposite direction of gravity. What is the net force acting on the parachutist?
  
  
  
  
  
  
  
  
  
  
  - d. With his parachute now open, what will the acceleration be?

e. Repeat # 9 for a parachutist with a mass of 150-kg. Will his acceleration for part d be more, less or the same? Explain.

4. A sled is being pulled along a horizontal road at constant speed by means of a rope that makes a  $25^\circ$  with the horizontal. If the friction between the sled and the snow is 84-N, how much is the forward pull?

a. How much is the tension on the rope?

5. A sign is supported as shown; the tension in the rope is 350-N. How much does the sign weigh if the angle between the rope and the wall is  $40^\circ$ ?

6. A 20-kg pile of books is resting on a plank tilted so that it makes an angle of  $20^\circ$  with the ground. How much force do the books exert against the plank?

7. A force of 20-N is needed to push a wagon up a frictionless  $35^\circ$  slope. How much does the wagon weigh?
