

Parachute Area vs. Drop Time

Answer the following questions on a separate sheet of paper using complete sentences.

1. Is there a definite relationship between the area of the parachute and the drop time?
2. Does more area equal more drop time? Why do you think this is so?
3. Were there any factors in this experiment that could have thrown off the results?
4. Does the shape of the parachute make a difference?
5. Which parachute performed the best? Worst? Why do you think so?
