Semester I Review Project

- Each group of roughly 4 will present a review of a particular topic from the Fall Semester

- Each presentation should be **10 minutes** and include the following:

  1. A review of the concepts

  2. At least 3 common mistakes or misconceptions relevant to the topic and how to avoid them

  3. Discuss strategies for tackling free-response questions

     - How do you figure out what an FRQ is asking you to do?

     - Is there any information needed to answer different FRQs that might be *implied* rather than directly stated?

     - In what ways might your topic draw from other units we've covered?

     - Feel free to use examples problems, but remember, I'm not looking for how to solve the problem, I'm looking for how to *think* about the problem

  4. Five practice multiple choice questions for the class

     - Optional: use resources such as www.polleverywhere.com to create interactive MC questions

- Everyone in your group must talk

- Presentations will be composed on Power Point, Google Slides, or a similar program, but feel free to use the white board to your advantage

*The review project is worth **15,000 exp***
